                "reasoning": "We need to output Selenium Java code to extract the given DOM elements, but not using ID if the value has number in it. The IDs have numbers: createLeadForm_companyName (no number), createLeadForm_lastName (no number), createLeadForm_firstName (no number), ext-gen630 (has number). So we should not use ID for ext-gen630, but can use ID for others? The instruction: \"Do not use ID if the value has number in it.\" So for IDs containing numbers, avoid using ID. ext-gen630 contains number, so use another locator (e.g., By.cssSelector or By.xpath). For others, IDs have no numbers, so we can use By.id.\n\nWe need to \"Extract the below given DOM\" meaning locate elements? Provide code to find them and maybe interact? Provide Selenium Java code only, no explanations.\n\nWe'll write code snippet: WebDriver driver = new ChromeDriver(); then locate elements: WebElement companyName = driver.findElement(By.id(\"createLeadForm_companyName\")); etc. For submit button: WebElement submitBtn = driver.findElement(By.cssSelector(\"input.smallSubmit[name='submitButton'][value='Create Lead']\")); Or use By.xpath.\n\nWe'll also maybe fill values? Not required. Just extraction.\n\nProvide only Java code.\n\nLet's produce a class with main method.\n\n"
